

Hybridization of humans with the Abductor race

The Zetas have been asked about the hybridization of humans by the Abductor Race and, in a questioning process, responded with the following:

Question: Your race (the Zeta's) takes eggs and sperm from Zeta hybrid Humans, with their consent - there appears to be other races doing the same thing.

Answer: Yes.

Question: Why are other races mimicking that process?

Answer: Which race are we discussing?

Question: The Abductors (commonly referred to as 'grays' – one of the 63 races of the 'gray species').

Answer: They are more intelligent than you know. Often, they do ask for permission but through guile, to beguile, to trick the human. Others do not ask for permission and just take. This is why the capacity to enter back to the collective (collective conscious of the 'grey species') is diminished. They (the Abductors) are unable to form a cohesive collective mind for their race.

Question: The Abductors that do ask for permission are suggesting that the humans they are 'visiting' are hybrids of their race.

Answer: They would need to take over to possess the fetus. But the ability of the spirit person in the womb has a greater ability to resist. The Spirit would not even see the Abductor consciousness.

Question: So, the Spirit consciousness cannot be removed from the fetus?

Answer: No, they do not have permission, but of course once you are an adult you can be taken (abducted).

Question: What's the purpose of the extractions of biological material by the Abductors?

Answer: They wish to create containers for themselves, they wish to experience. They do as humans do - they test, recreate and modify genetic material to see what containers can be created. Just as your human race create containers to inhabit. But the process is different for each species. Humans provide procreation and then birthing. Other races produce their own containers. Depending on the race, depends on the container required.

Question: So, the abductors are creating human containers?

Answer: So, it is the latter, they are not, so unadvanced that they would create human containers to populate as they cannot bind to the frequency of the cellular matter of the container. They

cannot experience what it is like to be human. That is why you must be in symbiosis through agreement and freewill, for our race to experience what it's like to be human. To simply inhabit a container without a spirit person means we would not understand human emotions.

Question: To clarify - The abductors are creating genetically modified human containers so they can have experiences in a container modified with Abductor cellular matter? Is that correct?

Answer: Yes, that is correct.

Question: Are you aware of their aspirations/long term plans?

Answer: It is a technique to see difference - to grow and to see capacity. Humans are not the only race they do this with. The mistake is that they negate the capacity for themselves in consciousness to be in symbiotic relationship with Spirit as they have not done so in freewill. Even to the point that if an abductor gray inhabited a human form, there would be no capacity to enliven the human or to keep them alive.

Question: Some humans have suggested the abductors have a long-term goal of replacing all humans with modified containers globally.

Answer: That is amusing. You are saying that others (humans) have said the this race seeks to genetically and generationally go backwards? All of these statements, made by humans, are based around visitation that the mind is unable to perceive. They then create imagery and stories around contact by any race and the mind fills in the gaps.

Question: Why would they mislead women to believe they have been chosen for a higher purpose.

Answer: They are not successful generally when doing this.

Question: Why do they show the mother their child, their biological off-spring?

Answer: If they create the child, it does not have a spirit component as it was not born through the birth process - the human form is not (unable to be) enlivened in maturation technology. If the child is in gestation (within the human mother), then the child has a spirit component. And that is why the species show the parent the child.

Question: So in what sense is the child a hybrid?

Answer: They are not. They are trying to understand how to enliven the human form, and this is using the genetically modified container.

To inhabit a human form one must understand how the human form operates. They study the child, they study the way the spirit person binds to the container so they can do this within the modified container themselves. They are never successful because each human is different - they

may have the same biological structure but the frequency is different. This is why I have said we initially also had the same problem, but through the symbiosis, we would take core samples from our contactees to see if the consciousness would bind to the cellular level of the human container.

They see it as a methodology for creating a pathway to experience for themselves.

Question: Are they (the Abductors) trying to take over the human race?

Answer: No.

Question: The genetically modified humans (the Human-Abductor hybrids), are the grays able to bind to them?

Answer No, technically you can enliven the body to action, but it cannot be animated as the consciousness (of the Abductor) cannot be entered into the host.

Without spirit there is no capacity to enliven the container.
